Workshop: Basic UNIX for Biologists

ISUGIF

This hands-on workshop will be an excellent starting point for biologists who want to learn basic UNIX commands to perform simple tasks. This workshop will include three sections, each addressing different levels of UNIX computing. The first section will introduce users to basic UNIX environment skills; the second section teaches necessary skills to perform routine file manipulations and the third section will serve as an introduction to high performance computing clusters available at Iowa State University. This workshop will also serve as a basic pre-requisite for other workshops that will be offered by GIF.

Due to popularity of this workshop, another session is now open for registration

June 23rd and 27th, 2014, 12:30 to 4:30 PM

1340 Molecular Biology (Computer lab)

Registration:

Register by sending email to **gif@iastate.edu.** Please include your name, NetID, department you belong to and the account number you want use for paying the registration fee. Registration is limited and are based on first come first serve.
Register before June 25th, 2014, 5:00 PM

Registration cost: $40.00
